

ARCHANGEL TOKEN

Technical Roadmap

v2.0 october 2021

The Vision for our Technical Roadmap

The ArchAngel Token Technical Roadmap contains our project's plan to implement existing, useful, and valuable features into our token. Our Technical Roadmap drives the project beyond existing technical boundaries through discovery, exploration, critical thinking, problem solving, innovation, and functional design & development.

Fact: Most tokens within Crypto lack technical vision. The era of one-dimensional meme coins and the ridiculous pace of “off-the-cuff no-vision” projects being launched into the Crypto ecosystem clearly demonstrate a saturation of tokens that will not survive the cycle of adoption within Crypto. They do not present a viable long-term investment.

The Fix: We developed a Technical Roadmap that focuses on adding value now while also ensuring the project continues to add value to the ArchAngel Token over the long-term. Our plan includes phased feature development and releases while working concurrently on identifying major challenges or problems within Crypto that we can solve.

The ArchAngel Token's technical approach is both multi-dimensional and sustainable.

Dual-Path Development

ArchAngel has an aggressive dual-path technical approach driven by two distinct goals:

- 1. Short Term:** If you have read our “Collaboration Network” and our “Community Voting Archive”, you already know how we arrived at this technical approach. Our short-term goal is to saturate the ArchAngel Token ecosystem with features that add immediate value and purpose to the token. This is accomplished by implementing “**Features**” which are described in more detail within this document.
- 2. Long Term:** Our long-term technical initiatives represent major pieces of functionality that solve a specific problem within Crypto, either an existing problem or a problem that is coming through global adoption. Our “**Epics**”, as described in more detail within this document, are primary sectors within Crypto where we believe there are challenges and problems on the horizon that we can solve. We are not waiting for those problems to surface. We are going to develop a solution for those problems so that they can be avoided.

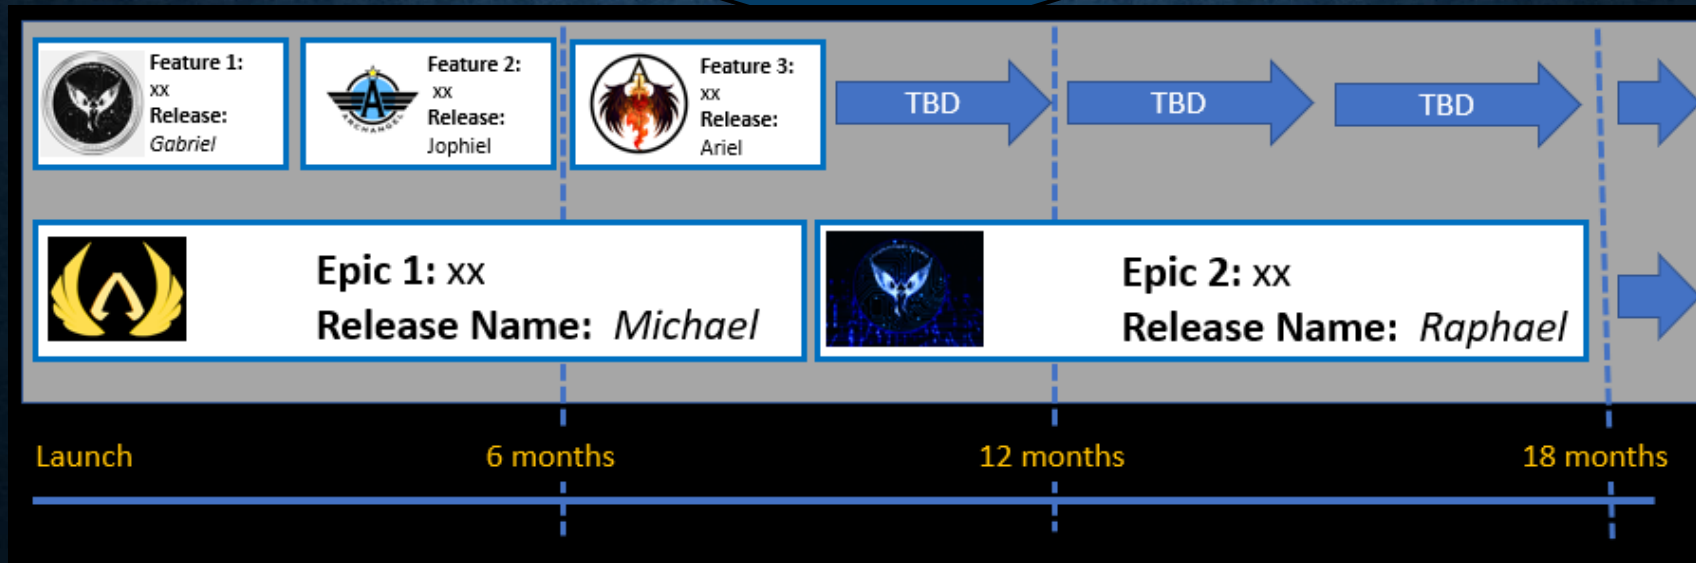

From Desired to Required

Desired

Feature?	Feature?	Epic?	Epic?
Feature?	Feature?	Epic?	Epic?
Feature?	Feature?	Epic?	Epic?
Feature?	Feature?	Epic?	Epic?

Required

Innovation Lab (IL)

Ideas that originate from our Community move into the “IL” for subsequent research, analysis, and high-level problem solving. This is where root cause analysis is performed, and technical ideas become refined to determine follow-on steps with the community.

Feature Development: A core group of developers focus on specific community-selected Features already assigned to a development timeline within our Technical Roadmap.

Epic Development: A core group of developers focus on broader crypto sector Epics (large features) already assigned to a development timeline within our Technical Roadmap.

Innovation Lab

Each of the Features and Epics will have their own Release Name (one of the Arch Angels), telegram discussion group, and team of developers and testers. The teams are comprised of volunteers and are self-managing and self-paced. ArchAngel will evaluate each Feature and Epic and will provide the required assets (licenses, software, platform access, etc.) needed to complete the work.

Feature 1: Staking Pool
Release Name: *Gabriel*

Feature 2: BNB Cross
Release Name: Jophiel

Feature 3: Join Swaps
Release Name: Ariel

Epic 1: Markets (Buy, Sell, Trade)
Release Name: *Michael*

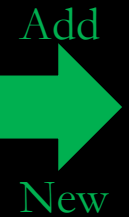

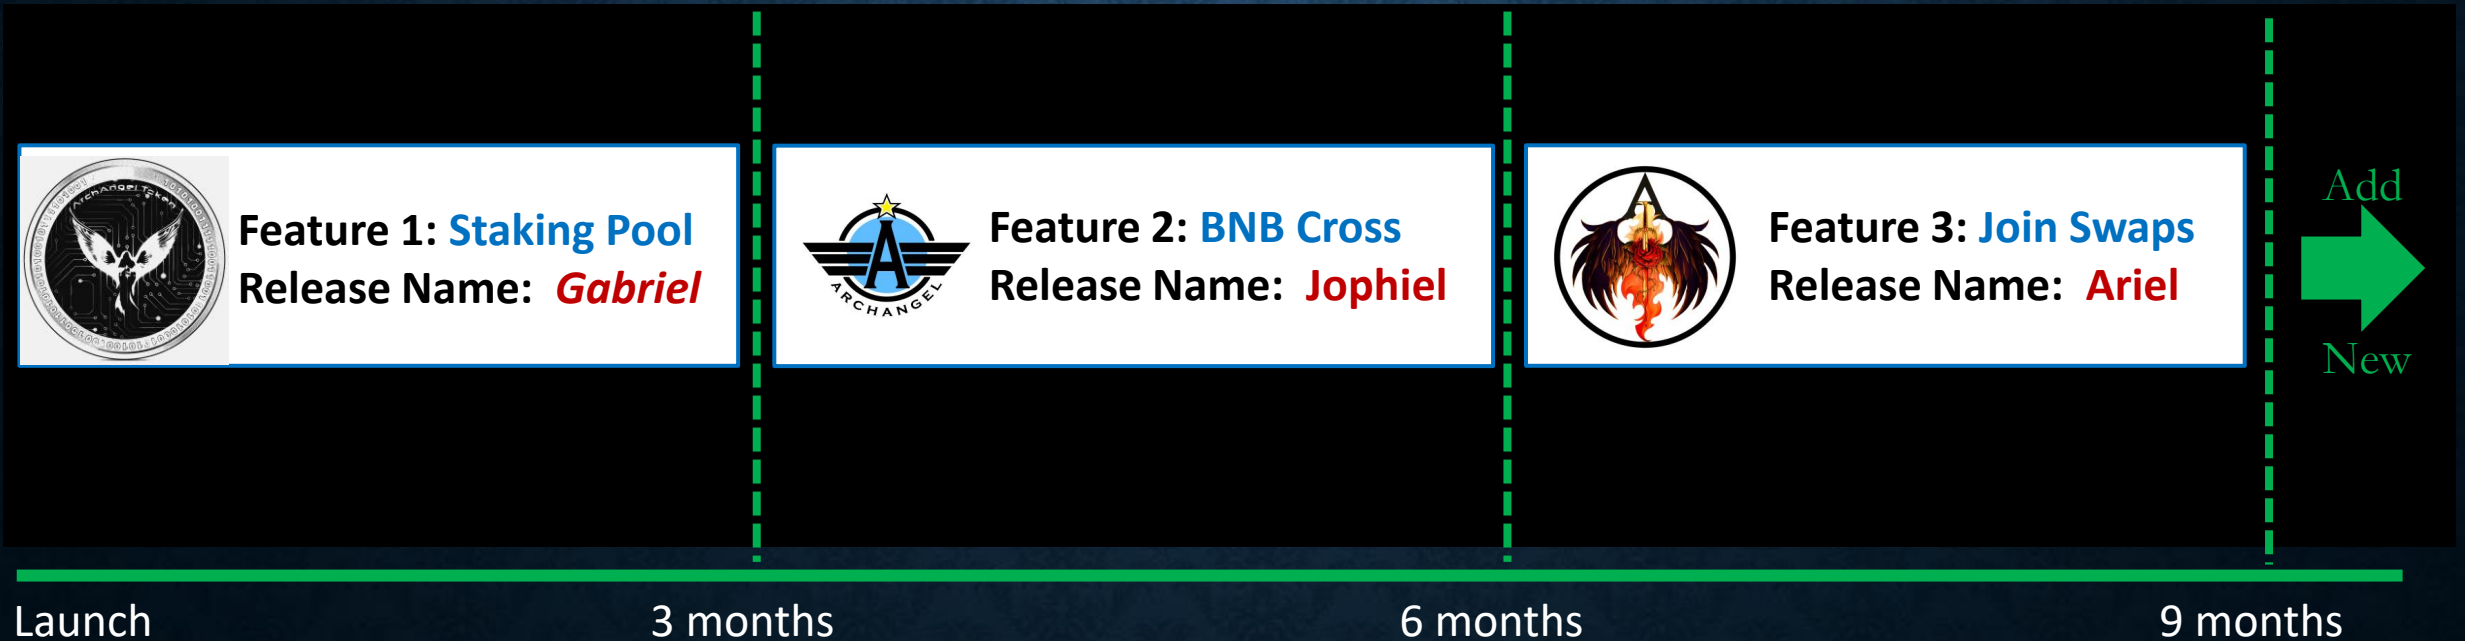

Epic 2: Decentralized Finance
Release Name: *Raphael*

Features

The first path within our Technical Roadmap contains the development of 3 features or functions that will become part of the token's ecosystem. These are smaller initiatives and represent features or functions already being utilized within crypto projects that add immediate function, use, and value to the ArchAngel Token. These features were selected and prioritized by community vote. It is our goal to develop, test, and release each feature within a 3-month timeline.

As of October 4th, 2021

Epics

The second path within our Technical Roadmap contains the detailed exploration, analysis, and research of 2 specific areas within Crypto. These sectors were chosen by community vote and represent primary functional areas within Crypto where innovation and technical solutioning are required. Our Epics are major pieces of functionality and have a 9-month timeline from discovery to solution. Each Epic has its own release name.

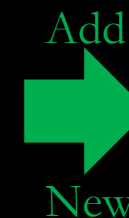

As of October 4th, 2021

Epic 1: Markets (Buy, Sell, Trade)
Release Name: *Michael*

Epic 2: Decentralized Finance
Release Name: *Raphael*

Launch

9 months

18 months

Consolidated Paths

Our Features and Epics run on separate development paths but execute concurrently within the same project timeline. This style of development and continuous innovation provides numerous benefits to the ArchAngel Token. We add smaller, valuable, and useful features in rapid succession while simultaneously focusing on major initiatives that will drive the project's technical capabilities deep into Crypto's expanding global adoption .
